EDUCATION

McMaster University

Bachelor of Applied Science in Computer Science (Co-op)

- **GPA:** 3.92/4.0 | **Minors:** Innovation, Business | **Coursework:** Algorithms & Data Structures, Object-Oriented Programming, Database Systems, Operating Systems, Software Security.

TECHNICAL SKILLS

AI & Agents: LangGraph, RAG, Multi-Agent Systems, LLM Deployment (Claude, Gemini, OpenAI), NLP, n8n

Languages: Python, TypeScript, JavaScript, C++, SQL, Solidity, HTML/CSS

App / Web: Node.js, Express.js, FastAPI, React.js, React Native, Next.js, Angular, REST APIs, Tailwind CSS

Cloud / Data: GCP (BigTable, Cloud SQL), AWS, Azure, PostgreSQL, MongoDB, OpenLayers, Power BI, Tableau

Developer Tools: Docker, GitLab CI, Git, Playwright, VS Code API, App Store Connect

EXPERIENCE

IGEO Consultants

May 2026 – Aug 2026

AI/ML and DevOps Intern

- Built **Node.js** and **Python** data pipelines ingesting satellite imagery reporting from commercial, open-source and social feeds, converting **unstructured text and PDF reports** into structured **MongoDB** records.
- Developed **information extraction** resolving facilities, quantities and dates to **precise coordinates**; shipped the **Angular/OpenLayers** map and caught a **production build failure** in **Docker/GitLab CI** before it broke the pipeline.

Google Developer Student Clubs (GDSC)

Sept 2025 – May 2026

Open Source AI Developer (InterfaceAI)

- Architected a **Step Creator Agent** in **LangGraph** converting natural-language goals into executable browser trajectories, shifting navigation to **declarative AI planning**.
- Engineered a **Memory AI Agent** with Python and **GCP BigTable** to persist user context, enabling **stateful autonomous browser sessions** across runs.

Needpedia

May 2023 – Feb 2024

Software Developer

- Built full-stack features in **Python** and **React.js**, shipping **5+ internal tools** that cut manual task overhead by **25%**.
- Optimized **Node.js** ingestion pipelines to handle **5,000+ requests/hour**, improving reliability across internal data workflows.

PROJECTS

Switchboard (VS Code Extension) | *TypeScript, VS Code API, Node.js, Multi-Agent Systems*

- Built a **VS Code extension** for **multi-agent coding orchestration**, connecting Codex, Cursor, Claude and Gemini through a single **Leader/Worker** workflow.
- Implemented **diff tracking, workflow trees and resumable thread memory** so developers route sub-tasks and resume sessions without restating repo context.

AI-MER (Agentic Matchmaking Platform) | *Python, Gemini API, ElevenLabs, MongoDB*

- Built **Digital Twin agents** that simulate speed dating conversations, with **voice-first onboarding** via ElevenLabs to capture personality traits.
- Engineered an **EMA-based telemetry engine** to smooth sentiment volatility and generate **real-time compatibility scoring** across agent interactions.

VENTURES

Jobbler.ai | *Python, FastAPI, Next.js, TypeScript, PostgreSQL, Chrome MV3, Playwright, Claude API*

- Shipped a **Chrome extension (Manifest V3)** published on the **Chrome Web Store** that runs a **Claude-driven navigation agent** in the user's own browser, auto-filling and submitting on **Workday, Greenhouse, Lever and Ashby** with **Gmail API** receipt verification.
- Own the full production stack: migrated **SQLite to PostgreSQL** for concurrent multi-user access, deployed a **Dockerized FastAPI backend on Railway** with a **Next.js frontend on Vercel**, **Google OAuth** and live **Stripe subscriptions**.

SkinC (Apple App Store) | *React Native, TypeScript, Node.js, MongoDB, AWS*

- Built and launched an **AI skin analysis app** with **camera-based scan onboarding**, personalized routines and a subscription experience.
- Engineered the stack across **mobile, backend, cloud and App Store release**, including auth and subscriptions.
